                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1, Appendix Sequence 1, Appendix Sequence 1, Appendix Sequence 19, Appendix Sequence 1, Appendix Sequence

is Sequence 1, Application US/09302596

sequence 1, Application US/09302596

patent No. 6284725

GENERAL INFORMATION:

APPLICANT: Coolidge, Thomas R.

TITLE OF INVENTION: Ischemic and Reperfused Tissue

TITLE OF INVENTION: Ischemic and Reperfused Tissue

TITLE OF INVENTION: 1schemic and Reperfused Tissue

FILE REPRENCE: 1999-04-30

FRIOR APPLICATION NUMBER: 60/103,498

PRIOR PRIOR DATE: 1998-10-08

NUMBER OF EXQ ID NOS: 13

SOFTWARE: Patent In Ver. 2.0

SEQ ID NO 1

IERNGTH: 37
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 37;
     Enzymatic Method for Modification of
Recombinant Polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Indels

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 32,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3, Application US/08095162

Patent No. 5512459
GENERAL INFORMATION:
APPLICANT: Wagner, Jay
APPLICANT: Henriksen, Dennis
APPLICANT: Partidge, Buce
APPLICANT: Manning, Shane
TITLE OF INVENTION: Enzymatic Method for Modification of
TITLE OF INVENTION: Recombinant Polypeptides
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 30;
                                                                                                                                                                                                                                                                        Sequence 12, Application PC/TUS9510793

Sequence 1, Application US/08961405A
Patent No. 6191102
GENERAL INFORMATION:
APPLICANT: DIMARCHI, Richard D.
APPLICANT: Efendic, Suad
ITILE OF INVENTION: OSE OF GLP-1 ANALOGS AND DERIVATIVES
ITILE OF INVENTION: ADMINISTERED PERIPHERALLY IN REGULATION OF OBESITY
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS & THORNEURG
STREET: 200 W. Madison, Suite 2601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 6, Application US/08961405A

GENERAL INFORMATION:
APPLICANT: Efendic, Suad
TITLE OF INVENTION:
TITLE OF INVENTION: WOCARDIAL INFARCTION
NUMBER OF SEQUENCES:
ADDRESSER: BRINKS, HOFER, GILSON & LIONE
STREET: NEC TOWER - Suite 3600, 455 N. Cityfront
CITY: Chicago
STATE: Illinois
COUNTRY: USA
ZIP: 60611-599
COMPUTER REDABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CLASSIFICATION NUMBER: US/08/915,918A
FILING DATE: 21-AuG-1997
CLASSIFICATION NUMBER: 35,601
REGISTRATION NUMBER: 35,601
REGISTRATION NUMBER: 35,601
REFERENCE/DOCKET NUMBER: 35,601
REFERENCE/DOCKET NUMBER: 35,601

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3, 1

Patent No. US20020147131AJ
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Coolidge, Thomas L.
APPLICANT: Coolidge, Thomas L.
APPLICANT: Ellers, Mario R.W.
ITILE OF INVENTION: Metabolic Intervention with GLP-1 to Improve the Function of Isch
TITLE OF INVENTION: Reperfused Skeletal Muscle Tissue
FILE REFERENCE: P03660US6
CURRENT FILING DATE: 2001-09-11
PRIOR FILING DATE: 1999-04-30
NUMBER OF SEQ ID NOS: 13
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 5:
IENGTH: 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5, Application US/10091258

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0;
APPLICANT: EHLERS, WARIO

TITLE OF INVENTION: TREATMENT OF ACUTE CORONARY SYNDROME WITH GLP-1

FILE REFERENCE: 081937/0395

CURRENT REPERENCE: 105/09/982,978

CURRENT FILING DATE: 2001-10-22

PRIOR APPLICATION NUMBER: 09/859,804

PRIOR PILING DATE: 2001-05-19

PRIOR PILING DATE: 2000-05-19

PRIOR PILING DATE: 2000-05-19

SOFTWARE: Patentin Ver. 2.1

LENGTH: 31

TYPE: PRT

CRGANISM: Unknown Organism

PRATICE: NAMEMENT OF STATE ORGANISM: Mammalian GLP

PROMANES: PRT

PRATICE: PRT

PROMANISM: Mammalian GLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 5. Application US/09302596
Sequence 5. Application US/09302596
Patent No. 6284725
GENERAL INFORMATION:
APPLICANT: Coolidge, Thomas R.
APPLICANT: Coolidge, Thomas R.W.
TITLE OF INVENTION: Metabolic Intervention with GLP-1 to Improve the Function of TITLE OF INVENTION: Insteme and Reperfused Tissue
TITLE OF INVENTION: Insteme and Reperfused Tissue
TITLE OF INVENTION: Insteme to 87.99/302,596
CURRENT PILING DATE: 1999-04-30
CURRENT FILING DATE: 1999-04-30
PRIOR PPLICATION NUMBER: 60/103,498
PRIOR PPLICATION NUMBER: 60/103,498
PRIOR PPLICATION NUMBER: 60/103,498
PRIOR PER DATE: 1998-10-08
NUMBER OF SEQ ID NOS: 13
SOOFWARE: Patentin Ver. 2.0
